

Part 1			
a	React project set up correctly using Vite	2	Vite React project is correctly configured and runs successfully
b	/backend and /frontend folders created. frontend/src has /components and /pages	3	Folders in the right place
Part 2			
c	Header / Navigation Component	1	Navigation component is reusable, contains appropriate navigation links, and is used on all required pages
d	Post Components (Create Post, Post, Edit Post, Image, Comments)	5	* 1 each
e	Post Preview Component	1	* 1 each
f	Profile Components (Profile, Profile Preview, Edit Profile, Friend)	4	* 1 each
g	Splash page [1] (with sign-in [1] and sign-up [1] forms present)	3	* 1 each
h	Component(s) that lists posts (ideally using post preview)	1	
i	Components make use of dummy data passed down from page / highest parent	1	
Part 3			
j	2 Components with forms have client-side validation	4	2 x 2 separate components - test in browser
Part 4			
k	Required static routes work correctly	2	For example: * Splash/Home routing works [1] * Login/Sign-up routing works where implemented separately [1]
l	Profile and Post page use dynamic routes	4	* Correct dynamic Profile route [1] * Profile page successfully accessible using an ID [1] * Correct dynamic Post route [1] * Post page successfully accessible using an ID [1]
Part 5			
m	The sign-in endpoint exists and returns dummy data	2	[1] existing [1] returning dummy data
n	The sign-up endpoint exists and returns dummy data	2	[1] existing [1] returning dummy data
o	Sign-in and sign-up forms connect to the appropriate Express endpoints	2	* Sign-in form sends request and handles response [1] * Sign-up form sends request and handles response [1]
Part 6			
p	Application runs on Docker	1	Frontend and backend run successfully in separate Docker containers
q	Github +2 commits	2	At least 5+ commits total
	Minus	-4	-10% if node_modules included in submission
	Total	40
